What's New in the AnEyeOnFTP?

AnEyeOnFTP is a remote file searching utility designed to allow you to look for files on more than one remote FTP location and download those entries that are of interest. Simply enter the name of the remote location and AnEyeOnFTP will start searching for that entry. It includes an intuitive wizard that can easily be used by first time users. However, more experienced users can start the search with all the parameters of the operation. The search panel allows the user to provide the location of the files as well as parameters used to filter the search. The search operation can be started immediately and it is not limited to the time of the day; files can be downloaded or added to the transfer queue as they are found. The download manager can be used to download an entry without waiting for the file to be completely transferred. The number of entries allowed in the queue can be changed in the options. The latest statistics can be viewed by the user and one can see the progress of the transfer at any time. If a search operation takes too long it can be interrupted at any time by the user. AnEyeOnFTP supports all the formats used by FTP and even does not require any format conversions. Network Address Translation - NAT is a service used by ISP's to provide remote users access to the internet. The service is not in use by home users as it is not needed in most situations. NAT is a very good tool for any organisation that wants to provide external connectivity to its users but does not have a single server with which to provide access to the Internet. FTP access can be managed using the AnEyeOnFTP software. It will allow to convert the FTP ports to the NAT port used by the server. Using AnEyeOnFTP you can find FTP connections that are not working correctly because of the use of the NAT. AnEyeOnFTP is able to locate the correct server, port and protocol using the information provided by the remote users. It can then offer a simple solution to provide the user with a working connection by simply changing the configuration and allowing the user to connect. AnEyeOnFTP can be installed on any network using any of the following methods: Multiple networks Is it possible to use AnEyeOnFTP on more than one network? Yes, AnEyeOnFTP can easily be installed on multiple networks and it is possible to work on each network using one single instance of AnEyeOnFTP. There is a possibility to use a single instance of AnEyeOnFTP on each network and have several accounts to access the different networks from the same application. The configuration options can be used to change the mode that the application will use; this is configured automatically by the program when it is launched for the first time. In order to create a new user
